R_ggplot2

iris

GGPlot graph Format

There is a specificformat to create ggplot graphs

```
ggplot (data = ) + < GEOM_FUNCTION >
  (mapping = aes( < MAPPINGS > ))

geom_functions

geom_line() , geom_point() ,
  geom_histgram(),

geom_col(), geom_bar()

geom_boxplot(), geom_violin(),
  geom_density()
```

data = iris

Install ggplot2 if not installed

#install.packages("ggplot2")

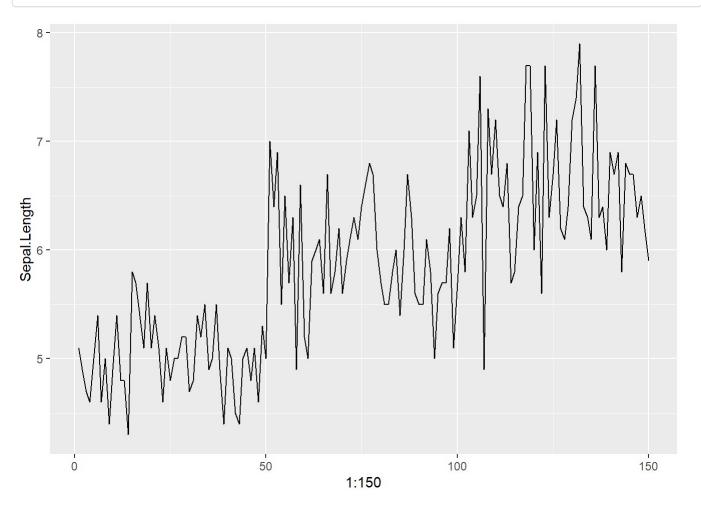

Load the ggplot2 library

library(ggplot2)

Line plot

describe the trend

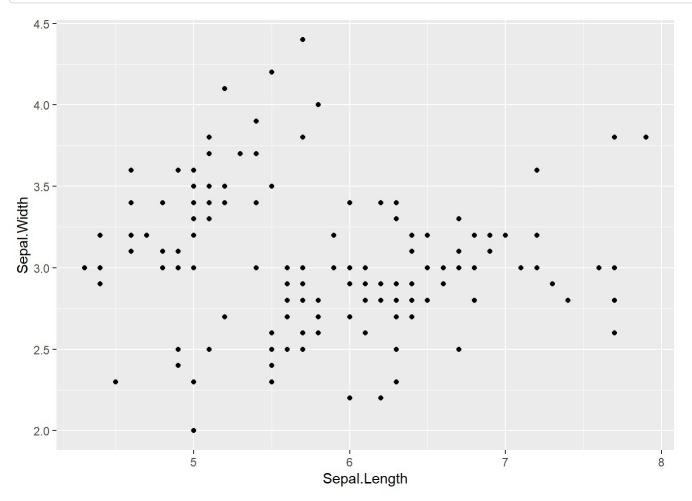

ggplot(data, aes(1:150, Sepal.Length)) + geom_line()

Scatter plot

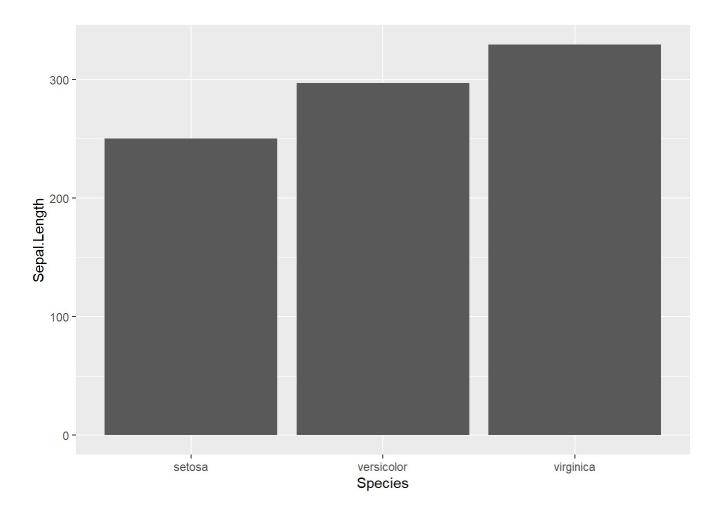

Understand relation between x & y

```
ggplot(data, aes(x = Sepal.Length, y = Sepal.Width)) +
  geom_point()
```

Bar chart

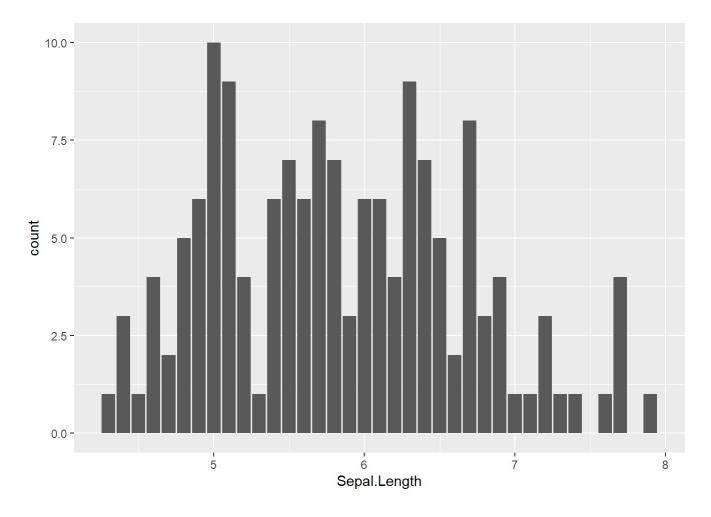

```
ggplot(data, aes(x = Species, y = Sepal.Length)) +
  geom_col()
```

Histogram

Count of each Sepal length occurrence

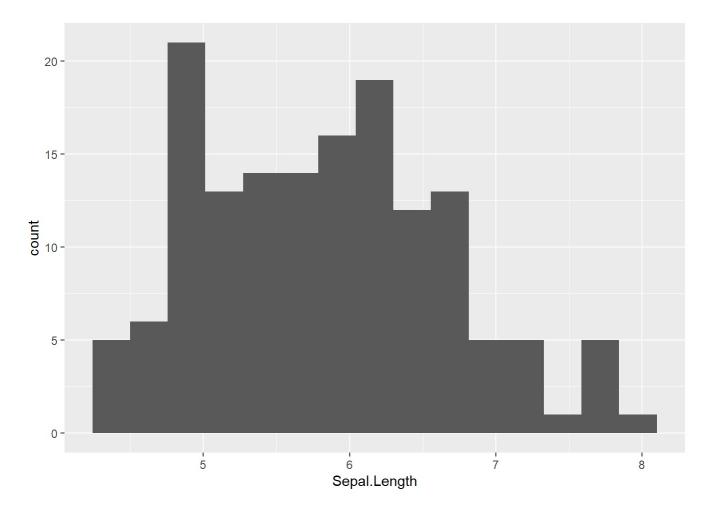

```
ggplot(data, aes(x = Sepal.Length)) +
  geom_bar()
```

Histogram

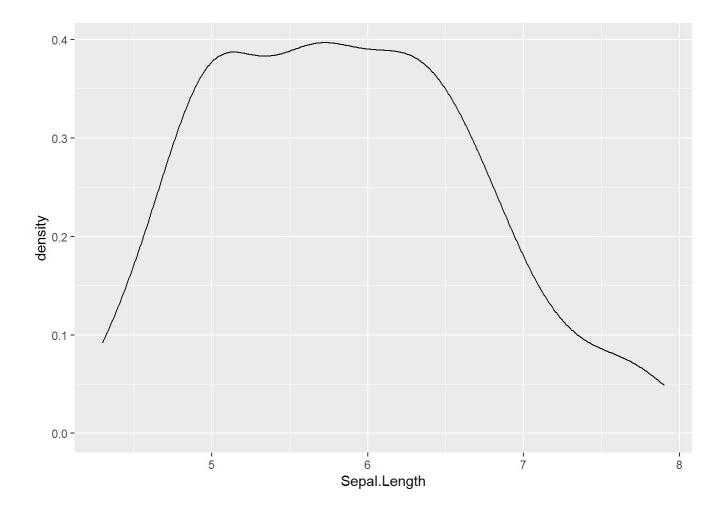

Count of each Sepal length occurrence here can control the groups

```
ggplot(data, aes(Sepal.Length)) +
  geom_histogram(bins = 15)
```

Density plot

```
ggplot(data, aes(Sepal.Length)) +
  geom_density()
```

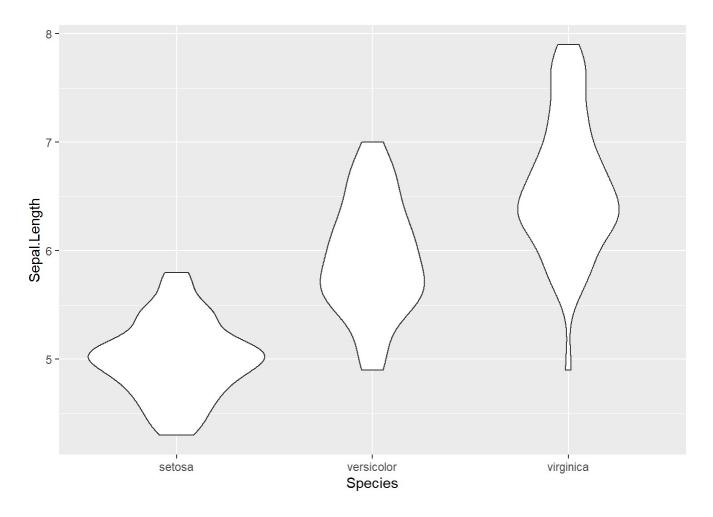

Box plot

```
ggplot(data, aes(x = Sepal.Length)) +
  geom_boxplot()
```

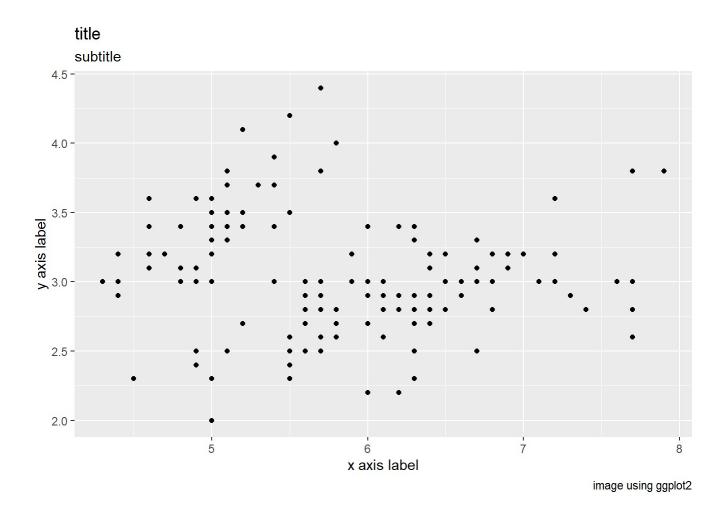

Understand distribution of Sepal length for different species

```
ggplot(data, aes(x = Species, y = Sepal.Length)) +
  geom_violin()
```

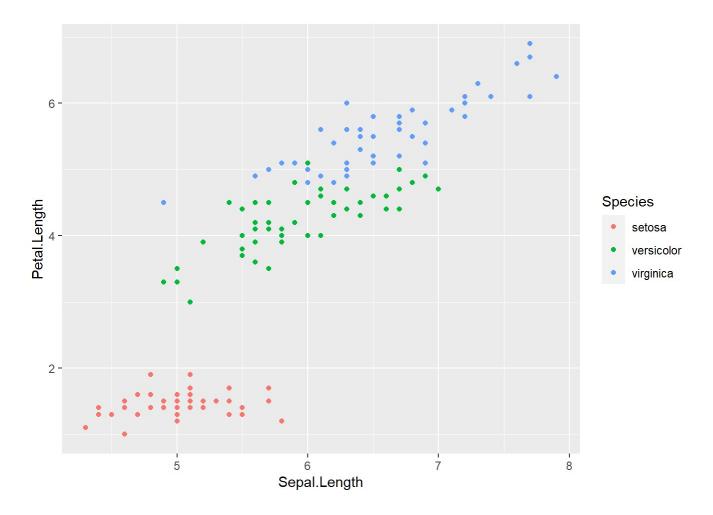

How to set labels and titles

Assign the graph to a variable

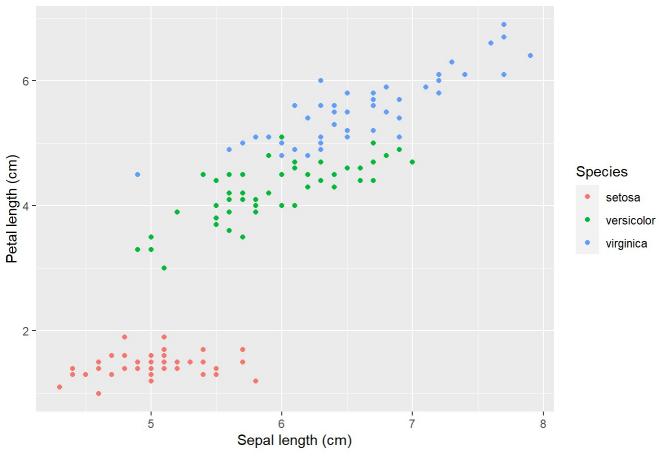

IrisPlot <- ggplot(iris, aes(Sepal.Length, Petal.Length, colour=Species)) + geom_point()
print(IrisPlot)</pre>

Modify x, y labels and title

labs() will allows specifying custom x axis and y axis labels ggtitle() allows to set title for the graph

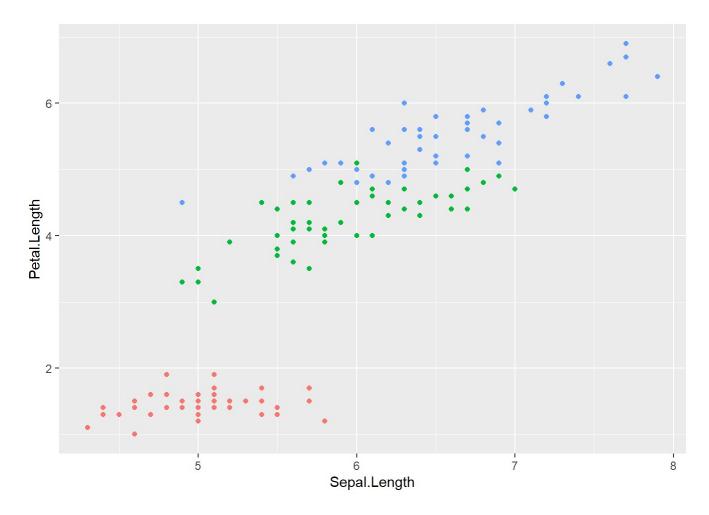

Handling Legends

Remove the legend

Remove the legend with the help of property "legend.position"

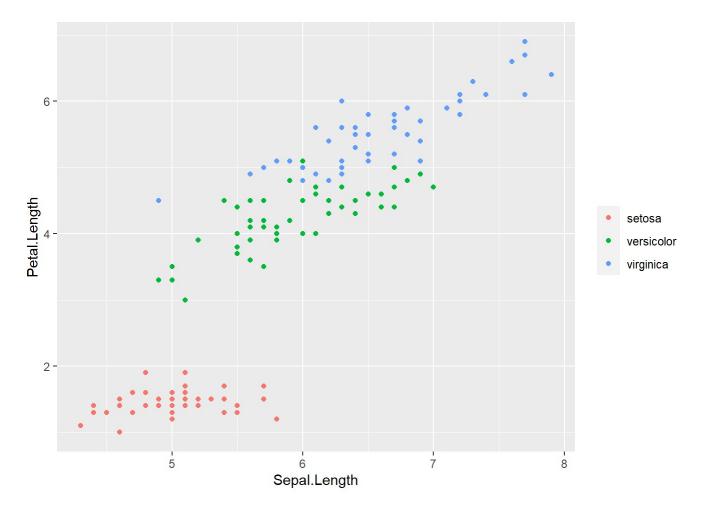

Set it to value "none" and we will not see the legends

```
# Assign basic graph to a variable
graph1 = ggplot(iris, aes(Sepal.Length, Petal.Length, colour=Species)) + geom_point()
# Remove Legend
graph1 + theme(legend.position="none")
```

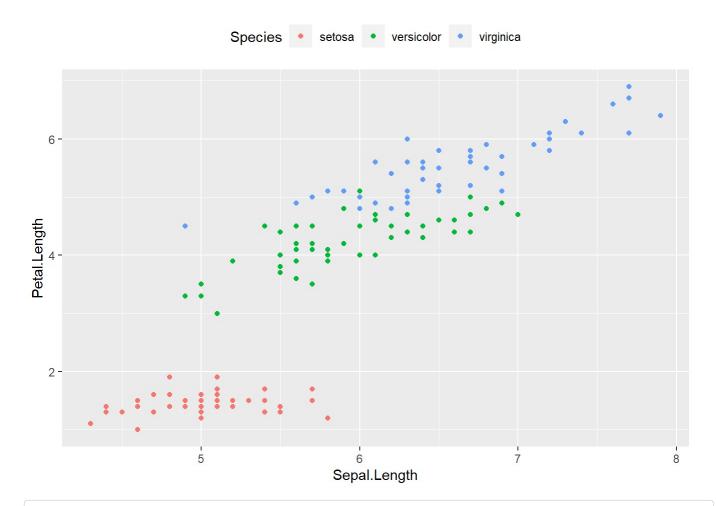

Hide the legend title

```
# Hide the legend title
graph1 + theme(legend.title=element_blank())
```

Set legend position

```
#Change the Legend position
graph1 + theme(legend.position="top")
```

graph1 + theme(legend.position="bottom")
